About me

- **Chetan Saxena** — SEO Expert
- 7 years of hands-on SEO experience
- Worked with multiple agencies worldwide and on 2000+ international client websites
- Available on +91 9667919525 · Chetanc16538@gmail.com

About your website

- Services on the website: outstation cab booking, cab packages, airport transfer service
- Searches this site should be winning: outstation cab delhi
- Pages I checked: 8
- Goal of the website: turn people searching for these services into calls and enquiries.

What I did

- Checked **http://127.0.0.1:8901** page by page — headings, titles, images, speed, technical setup and how the site appears to Google and AI tools.
- Found **46 serious issues** holding back leads, plus 53 smaller ones.
- Marked each problem on a screenshot and written how to fix it, below.

Where your website stands today

Scores out of 100. Below 60 needs work.

44

GOOGLE READY

21

SITE HEALTH

100

SPEED

34

AI VISIBILITY

40

AUTHORITY

Overall 43/100. 4 critical and 42 high-priority issues across 8 pages — almost all fixable quickly.

What is stopping your leads

One problem per point, with a picture of exactly where it happens. If the same problem is on several pages, I have shown one example and listed the rest below it — the fix is the same on all of them.

1 Pages on your site are returning an error

CRITICAL

THE PROBLEM

Returned HTTP 404. This is happening on **2 pages**.

WHY IT MATTERS

Anyone landing there hits a dead end, and any ranking that page had is lost.

HOW TO FIX IT

Restore the page or redirect it to the closest live page.

This page returns an error

```
http://127.0.0.1:8901/blog-old.html
```

Returned HTTP **404**.

From the code of <http://127.0.0.1:8901/blog-old.html>

Screenshot from <http://127.0.0.1:8901/blog-old.html> — the marked area is the problem.

Same fix also needed on 1 more page: `/pricing-old.html`

2 Your website is not secure

CRITICAL

THE PROBLEM

The site resolves over HTTP; no valid HTTPS response was found.

WHY IT MATTERS

Browsers show a 'Not secure' warning next to your address. Most people leave before reading a word.

HOW TO FIX IT

Install an SSL certificate and force every page to load securely.

Site is not served over HTTPS

`http://127.0.0.1:8901`

Not secure — there is no `https://` version of your site.
Browsers show a warning to every visitor.

From the code of `http://127.0.0.1:8901`

Screenshot from <http://127.0.0.1:8901> — the marked area is the problem.

THE PROBLEM

Page carries a noindex directive.

WHY IT MATTERS

However good that page is, it cannot appear in search at all while this tag is on it.

HOW TO FIX IT

Remove the noindex instruction from that page.

Airport Transfer Service in Delhi

Our airport transfer service in Delhi covers all three terminals of IGI airport with fixed fares and flight tracking so your driver waits even when your flight is late. Book online or call.

Screenshot from <http://127.0.0.1:8901/airport.html> — the marked area is the problem.

THE PROBLEM

'outstation cab delhi' appears 0x in body copy; missing from: meta_description, h2_h3, url_slug, image_alt, internal_anchors. This is happening on **7 pages**.

WHY IT MATTERS

Google matches searches to the words on your page. If the phrase is not there, you are not in the race.

HOW TO FIX IT

Work the main keyword naturally into the intro, one sub-heading and the body.

Target keywords barely used on the page

```
<title>Metro Cab Rental Service Delhi NCR - Book Outstation Taxi, Airport Transfer and Local Cabs  
Online 24x7</title>  
<h1>Reliable Cab Rental in Delhi for Outstation, Airport and Local Trips E</h1>  
<h1>Our Fleet</h1>  
<h2>Why choose us</h2>  
<h2>What areas do you cover?</h2>
```

From the code of <http://127.0.0.1:8901/>

Screenshot from <http://127.0.0.1:8901/> — the marked area is the problem.

Same fix also needed on 6 more pages: </about.html> </contact.html> </hidden-orphan.html>
</packages-duplicate.html> </packages.html> </services.html>

THE PROBLEM

No JSON-LD or microdata found on this page. This is happening on **7 pages**.

WHY IT MATTERS

Without this hidden data, Google and AI assistants like ChatGPT cannot confirm who you are, where you are, or what you charge — so they recommend someone else.

HOW TO FIX IT

Add structured business data (name, address, phone, services) to the site.

Services

We offer outstation cab booking, airport transfer and local rental packages at competitive rates.

Outstation

One way and round trip fares to major cities nearby.

Airport

Fixed price pickups and drops for Terminal 1, 2 and 3.

[Old pricing page](#)

Screenshot from <http://127.0.0.1:8901/services.html> — the marked area is the problem.

Same fix also needed on 6 more pages: `/about.html` `/airport.html` `/contact.html` `/hidden-orphan.html` `/packages-duplicate.html` `/packages.html`

THE PROBLEM

Only 160 words of main content. This is happening on **7 pages**.

WHY IT MATTERS

A few lines of text cannot outrank a competitor who answers every question a customer has.

HOW TO FIX IT

Expand these pages to cover pricing, process, coverage area and FAQs.

Thin content (under 300 words)

Words of real content on this page: 160

From the code of <http://127.0.0.1:8901/>

Screenshot from <http://127.0.0.1:8901/> — the marked area is the problem.

Same fix also needed on 6 more pages: [/about.html](#) [/contact.html](#) [/hidden-orphan.html](#)
[/packages-duplicate.html](#) [/packages.html](#) [/services.html](#)

THE PROBLEM

Target keyword 'outstation cab delhi' is not in the title. This is happening on **6 pages**.

WHY IT MATTERS

The title is the strongest match signal there is. Without the keyword you are invisible for that search.

HOW TO FIX IT

Put the main keyword at the start of the title.

Title does not contain a target keyword

```
<title>Services</title>
<h1>Services</h1>
<h3>Outstation</h3>
<h3>Airport</h3>
```

From the code of <http://127.0.0.1:8901/services.html>

Screenshot from <http://127.0.0.1:8901/services.html> — the marked area is the problem.

Same fix also needed on 5 more pages: [/about.html](#) [/contact.html](#) [/hidden-orphan.html](#)
[/packages-duplicate.html](#) [/packages.html](#)

THE PROBLEM

Canonical points to <http://127.0.0.1:8901/> This is happening on **3 pages**.

WHY IT MATTERS

You are handing your own traffic away. That page will never rank while this is set.

HOW TO FIX IT

Point the page's canonical tag at its own address.

Airport Transfer Service in Delhi

Our airport transfer service in Delhi covers all three terminals of IGI airport with fixed fares and flight tracking so your driver waits even when your flight is late. Book online or call.

Screenshot from <http://127.0.0.1:8901/airport.html> — the marked area is the problem.

Same fix also needed on 2 more pages: `/hidden-orphan.html` `/packages-duplicate.html`

THE PROBLEM

1 of 1 images have no alt text. This is happening on **3 pages**.

WHY IT MATTERS

Every image without a description is a missed entry in Google Images, and it fails accessibility checks that Google now watches.

HOW TO FIX IT

Add a short description to each image saying what it shows.

Our airport transfer service in Delhi covers all three terminals of IGI airport with fixed fares

This image has no description for Google

Screenshot from <http://127.0.0.1:8901/airport.html> — the marked area is the problem.

Same fix also needed on 2 more pages: `homepage` `/services.html`

10 Some links on your site lead nowhere

HIGH

THE PROBLEM

Link to <http://127.0.0.1:8901/blog-old.html> returns 404. This is happening on **2 pages**.

WHY IT MATTERS

A customer clicking a dead link usually leaves and calls someone else. Google treats it as a sign the site is unmaintained.

HOW TO FIX IT

Point these links at the correct pages, or remove them.

Screenshot from <http://127.0.0.1:8901/> — the marked area is the problem.

Same fix also needed on 1 more page: `/services.html`

11 Duplicate title tags across pages

HIGH

THE PROBLEM

Same title on 2 pages: <http://127.0.0.1:8901/about.html>, <http://127.0.0.1:8901/hidden-orphan.html>

This is happening on **2 pages**.

WHY IT MATTERS

Identical titles make pages look interchangeable and cause keyword cannibalisation.

HOW TO FIX IT

Write a distinct, page-specific title for each URL.

Duplicate title tags across pages

```
<title>About Metro Cab Rental | Delhi Taxi Company Since 2014</title>
```

From the code of <http://127.0.0.1:8901/about.html>

Screenshot from <http://127.0.0.1:8901/about.html> — the marked area is the problem.

Same fix also needed on 1 more page: `/packages.html`

12 You are blocking the AI assistants that could recommend you

HIGH

THE PROBLEM

robots.txt blocks GPTBot.

WHY IT MATTERS

Your site currently tells ChatGPT and others to stay out, so they can never name you when someone asks for your service.

HOW TO FIX IT

Allow the AI crawlers you want recommendations from.

AI crawlers are blocked in robots.txt

```
User-agent: *  
Disallow: /admin/  
  
User-agent: GPTBot  
Disallow: /
```

From the code of <http://127.0.0.1:8901/robots.txt>

Screenshot from <http://127.0.0.1:8901/robots.txt> — the marked area is the problem.

13 Two pages carry nearly the same text

HIGH

THE PROBLEM

100% content overlap with <http://127.0.0.1:8901/packages-duplicate.html>.

WHY IT MATTERS

Google picks one and buries the other. Both end up weaker than a single strong page would be.

HOW TO FIX IT

Rewrite one page around a different angle, or merge them.

Near-duplicate content between pages

Local Cab Rental Packages in Delhi NCR With Fixed Hourly and Kilometre Limits For You Choose a four hour, eight hour or twelve hour package for local travel in Delhi NCR. Each pack

From the code of <http://127.0.0.1:8901/packages.html>

Screenshot from <http://127.0.0.1:8901/packages.html> — the marked area is the problem.

14 No description under your Google listing

HIGH

THE PROBLEM

No meta description tag.

WHY IT MATTERS

Google scrapes a random sentence from the page instead. It reads badly, and fewer people click — even when you rank well.

HOW TO FIX IT

Write a 150-character description ending with a clear reason to call you.

No Google description written for this page

```
<head>
... no <meta name="description"> tag on this page...
</head>
```

From the code of <http://127.0.0.1:8901/>

Screenshot from <http://127.0.0.1:8901/> — the marked area is the problem.

15 A service you offer has no page of its own

HIGH

THE PROBLEM

No crawled page targets 'Outstation Cab Booking'.

WHY IT MATTERS

One page cannot rank for every service. Each service needs its own page to compete for its own searches.

HOW TO FIX IT

Create a dedicated page for this service with local keywords.

No dedicated page for a service you offer

No crawled page targets 'Outstation Cab Booking'.

There is no page on the website targeting this service.

From the code of <http://127.0.0.1:8901>

Screenshot from <http://127.0.0.1:8901> — the marked area is the problem.

THE PROBLEM

No mobile viewport meta tag.

WHY IT MATTERS

Without a viewport tag pages render desktop-width on phones and fail mobile usability.

HOW TO FIX IT

Add .

Mobile viewport meta tag missing

```
<head><meta charset="utf-8"/>
<title>Airport Transfer Service in Delhi | Metro Cab Rental</title>
<meta content="Book a fixed price airport transfer service in Delhi with Metro Cab Rental. Flight
tracking, meet and greet, 24x7 pickups from Terminal 1, 2 and 3 with no surge pricing."
name="description"/>
<link href="http://127.0.0.1:8901/" rel="canonical"/>
<meta content="noindex, follow" name="robots"/>
</head>
```

From the code of <http://127.0.0.1:8901/airport.html>

Screenshot from <http://127.0.0.1:8901/airport.html> — the marked area is the problem.

17 Page has almost no internal links

MEDIUM

THE PROBLEM

Only 1 internal links on this page. This is happening on **7 pages**.

WHY IT MATTERS

Internal links pass authority and tell Google which pages matter.

HOW TO FIX IT

Add 3-5 contextual links to related service or money pages.

Page has almost no internal links

```
http://127.0.0.1:8901/services.html
```

```
Only 1 internal links on this page.
```

```
Visitors and Google have almost no way to move on from this page.
```

From the code of <http://127.0.0.1:8901/services.html>

Screenshot from <http://127.0.0.1:8901/services.html> — the marked area is the problem.

Same fix also needed on 6 more pages: [/about.html](#) [/airport.html](#) [/contact.html](#) [/hidden-orphan.html](#) [/packages-duplicate.html](#) [/packages.html](#)

18 Your main heading does not contain the words customers search for

MEDIUM

THE PROBLEM

H1 does not contain 'outstation cab delhi'. This is happening on **6 pages**.

WHY IT MATTERS

People search for a service, not a slogan. If the heading does not carry that phrase, Google shows a competitor who does.

HOW TO FIX IT

Rewrite the heading around the keyword customers actually type.

This heading does not use the words customers search for

```
<title>Services</title>
<h1>Services</h1>
<h3>Outstation</h3>
<h3>Airport</h3>
```

From the code of <http://127.0.0.1:8901/services.html>

Screenshot from <http://127.0.0.1:8901/services.html> — the marked area is the problem.

Same fix also needed on 5 more pages: </about.html> </contact.html> </hidden-orphan.html>
</packages-duplicate.html> </packages.html>

You versus your competitors

I checked 127.0.0.1:8902 on the same 20 points I checked your site on. Same ruler, no guesswork.

12 BEHIND

5 LEVEL

3 AHEAD

Out of 20 things Google compares, your competitors are ahead on 12. The biggest gaps are pages on the website, average words per page, blog pages published. That is the real reason they appear above you.

The gaps that matter most:

- **Pages on the website** — 8 vs 48. Every extra useful page is another search you can turn up for.

- **Average words per page** — 88 vs 226. Google ranks the page that answers more of the customer's questions.
- **Blog pages published** — 0 vs 1. Regular posts tell Google the business is active and build topical trust.
- **Business data in code (schema)** — 1 vs 5. This is how Google confirms who you are, what you sell and where you work.
- **FAQ markup**. Puts your answers directly into search results and AI replies.

Where you already beat them

- service pages
- homepage load time
- page weight

What each competitor is doing to rank

127.0.0.1:8902

Outstation Cab Booking in Delhi NCR | RivalCabs

48 pages · 226 words per page · 1 service pages · 0 location pages · 1 blog pages · AI readiness 100/100

- FAQ markup, so Google shows their answers directly in results
- business data in code (LocalBusiness, PostalAddress, FAQPage)
- an llms.txt file guiding ChatGPT and Perplexity
- descriptions on nearly every image, earning image search traffic
- a fast homepage (62 ms)

What happens next

I can fix every error in this report. Beyond the fixes, what really moves the needle is a customised AI-SEO strategy built around your services and your city — that is what takes you to the top of search and brings in steady leads.

Every issue in this report can be fixed. Once the site is clean, the real growth comes from a content and AI-search strategy built around your services — so that when someone asks Google or ChatGPT for what you offer, your name is the one that comes up.

Call me and I will walk you through the plan.
